AWS IoT APN Acceleration Incentive Program

AWS invites you to participate in the AWS Partner Network (APN) IoT Acceleration Incentive Program (the "**IoT Acceleration Program**") to simplify the development of your FreeRTOS-based IoT device. FreeRTOS modules support original equipment manufacturers (OEMs) with secure device onboarding, deployment at scale, and over-the-air (OTA) updates. Take advantage of online tools and tutorials, and Quick Start Guides.

To get started, select an APN approved IoT connectivity module from a participating partner that best meets the needs of your IoT project. Participants in the IoT Acceleration Program will be eligible to receive a one-time AWS Promotional Credit ("**IoT Credit**") per device. Any receipt of AWS Promotional Credits is subject to the AWS Promotional Credit Terms & Conditions, as updated by AWS from time to time.

ELIGIBLITY REQUIREMENTS

To receive AWS Promotional Credits:
1. Participants must declare the AWS account used for the corresponding IoT project
2. Participants must use an APN approved[1] connectivity module to connect to AWS IoT Core
3. Devices need to connect to AWS IoT Core over MQTT and use x509 client[2] certificates for device identification
4. Participating projects must be in excess of 10,000 units with a minimum of 1,000 devices connecting at least three times in three months prior to AWS credit issuance.
5. Participants must accept IoT AWS Module Program Terms
