Notes:

1. Input Reflected Ripple is specified when measured with the filter shown below.

2. Output Ripple and noise is specified when measured with a 10uF tantalum and a 1uF ceramic capacitor at the converter output pins.
3. Transient response is specified without a capacitor at the output of the converter.
4. The Enable signal is Logic Low. It is referenced to Vi-. The pin should be tied to Vi- if it is not used. Isink = 1mA max, Voff = 15V max.

Startup Characteristics

Vin = 48V Iout = 0A Local O/P Sensing

Vin = 48V Iout = 55A Local O/P Sensing

Turn-Off Characteristic

Vin = 48V Iout = 55A 10mF output capacitance

Pre-Bias Startup Characteristic

Vin = 48V Pre-bias of 0.9V

Conducted EMI Characteristic with external filter as specified

$$R_{up}(V_{nom}, \Delta\%) := \left[5.11 \cdot V_{nom} \cdot \frac{(100 + \Delta\%)}{1.225 \cdot \Delta\%} \right] - \left(\frac{511}{\Delta\%} \right) - 10.22$$

$$R_{dwn}(\Delta\%) := \frac{511}{\Delta\%} - 10.22$$

$$\Delta\% = \left\lceil 100 \times \frac{(V_o - V_{nom})}{V_{nom}} \right\rceil$$

V_o : target output voltage

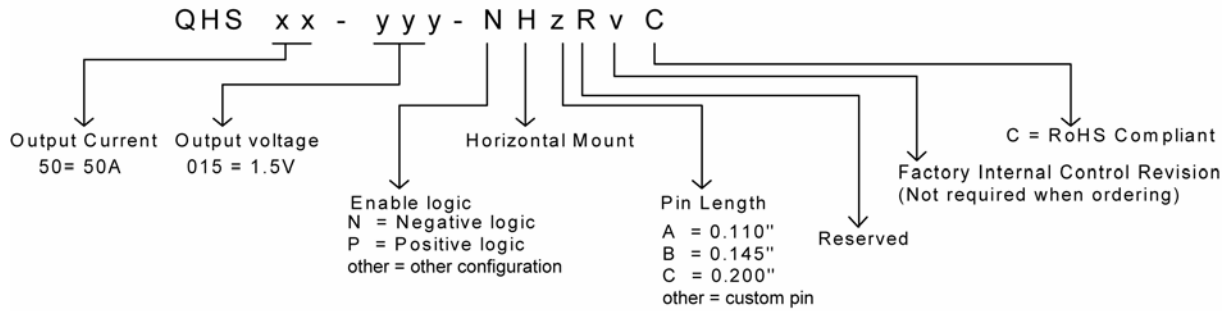

V_{nom} : nominal output voltage

Safety considerations

The QHS series of converters comply with IEC/EN/CSA/UL 60950, providing basic insulation, input to output. c-UL-us (US & Canada) and TUV approved. If this product is built into information technology equipment, the installation must comply with the above standard. An external input fuse (5A to 30A recommended) must be used to meet the above requirements. The output of the converter [Vo(+)/Vo(-)] is considered to remain within SELV limits when the input to the converter meets SELV or TNV-2 requirements.
