Packaging Information

Packaging	Specifications	Standard Packing Quantity
В0	Bulk	500

SFELF10M7_G series for FM-receivers are monolithic type ceramic filters that use the thickness expander mode of the piezoelectric ceramic. As part of the environment protection program, the solder for terminal plating and terminal-element connection inside of the ceramic filter contain no lead (Pb).

Features

1. Little dispersion of amplitude characteristics and phase characteristics (G. D. T. characteristics)

2. The SFELF_G series is based on SFELF_FA00/GA00/HA00, and it obtains high selectivity with low loss. There is little dispersion of amplitude and GDT characteristics, and low distortion rate can be obtained.

3. The flatness of GDT is inspected for all products.
