### Notices

The saturation allowable DC current value is specified when the decrease of the initial Inductance value at 30%. When a rated current (based on Temperature rise) is applied, the temperature rise due to self-heating of the product is 40°C or less. Keep the product temperature (ambient temperature + self-heating) below 150°C. The rated current value is the smaller of the rated current (based on Inductance change) or the rated current (based on Temperature rise). It can be considered for use with DCDC converters with a maximum voltage of 40 V or less.
