- Operating Temperature : -55°C to +125°C
- Storage Temperature : -55°C to +125°C

4. Style and Dimensions

5. Marking
No marking.

6. Standard Testing Conditions
< Unless otherwise specified >
Temperature : Ordinary Temp. (15 °C to 35 °C)
Humidity : Ordinary Humidity (25%(RH) to 85%(RH))

< In case of doubt >
Temperature : 20°C±2 °C
Humidity : 60%(RH) to 70%(RH)
Atmospheric pressure : 86kPa to 106kPa

MURATA MFG.CO.,LTD.
### 7. Specifications

| 7-2-2 | Bonding Strength         | Meet Table 1. | It shall be soldered on the substrate.  
               Applying Force(F) : 5N  
               Applying Time : 5s±1s  
               Applying Direction: Parallel to the substrate. |
| 7-2-3 | Bending Strength            |               | It shall be soldered on the substrate.  
               Substrate: Glass-epoxy 100mm×40mm×0.8mm  
               Deflection : 2.0mm  
               Speed of Applying Force : 0.5mm/s  
               Keeping Time : 30s |
| 7-2-4 | Vibration                  |               | It shall be soldered on the substrate.  
               Oscillation Frequency : 10Hz to 2000Hz to 10Hz  
               for 20 min  
               Total Amplitude 1.5mm or Acceleration 196m/s²  
               whichever is smaller  
               Testing Time : A period of 2 hours in each of 3 mutually  
               perpendicular directions. (Total 6 h) |
| 7-2-5 | Resistance to Soldering Heat |               | Pre-Heating : 150°C ± 10°C, 60s~90s  
               Solder : Sn-3.0Ag-0.5Cu  
               Solder Temperature : 270°C±5°C  
               Immersion Time : 10s±0.5s  
               Immersion and emersion rates : 25mm/s  
               Then measured after exposure in the room condition  
               for 48h±4h. |
| 7-2-6 | Drop                       | Products shall be no failure after tested. | It shall be dropped on concrete or steel board.  
               Method : free fall  
               Height : 75cm  
               Attitude from which the product is dropped : 3 direction  
               The number of times : 3 times for each direction  
               (Total 9 times) |
7-2-7 Solderability
The electrodes shall be at least 95% covered with new solder coating.

Flux : Ethanol solution of rosin, 25(wt)%
Pre-Heating : 150°C±10°C, 60s~90s
Solder : Sn-3.0Ag-0.5Cu
Solder Temperature : 240°C±5°C
Immersion Time : 3s±1s
Immersion and emersion rates : 25mm/s

7-3-Environment Performance

It shall be soldered on the substrate.

7-3-1 Temperature Cycle
Meet Table 1.
1 cycle:
1 step: -55°C(+0°C, -3°C) / 30min±3min
2 step: Ordinary temp. / 3min max.
3 step: +125°C(+3°C, -0°C) / 30min±3min
4 step: Ordinary temp. / 3min max.
Total of 100 cycles
Then measured after exposure in the room condition for 48h±4h.

7-3-2 Humidity
Temperature : 70°C±2°C
Humidity : 90%RH to 95%RH
Time : 1000h(+48h, -0h)
Then measured after exposure in the room condition for 48h±4h.

7-3-3 Heat Life
Temperature : 125°C±3°C
Applying Current : Rated Current (at Test temperature)
Time : 1000h(+48h, -0h)
Then measured after exposure in the room condition for 48h±4h.

7-3-4 Cold Resistance
Temperature : -55±2°C
Time : 1000h(+48h, -0h)
Then measured after exposure in the room condition for 48h±4h.

8. Specification of Packaging
8-1. Appearance and Dimensions (8mm-wide paper tape)

(1) Taping
Products shall be packaged in the cavity of the base tape of 8mm-wide, 2mm-pitch continuously and sealed by top tape and bottom tape.

(2) Sprocket hole:
Sprocket hole shall be located on the right hand side toward the direction of feed.

(3) Spliced point:
The base tape and top tape have no spliced point.

(4) Cavity:
There shall not be burr in the cavity.

(5) Missing components number
Missing components number within 0.1% of the number per reel or 1 pc., whichever is greater, and are not continuous. The specified quantity per reel is kept.
8-2. Tape Strength

(1) Pull Strength

<table>
<thead>
<tr>
<th>Top Tape</th>
<th>Bottom Tape</th>
</tr>
</thead>
<tbody>
<tr>
<td>5N min.</td>
<td>0.1N to 0.6N</td>
</tr>
</tbody>
</table>

(2) Peeling off force of Cover tape

*Speed of Peeling off: 300mm/min

8-3. Taping Condition

(1) Standard quantity per reel

| Quantity per 180mm reel | 10000 pcs./reel |

(2) There shall be leader-tape (top tape and empty tape) and trailer-tape (empty tape) as follows.

(3) On paper tape, the top tape and the base tape shall not be adhered at the tip of the empty leader tape for more than 5 pitch.

(4) Marking for reel

The following items shall be marked on a label and the label is stuck on the reel.

(1) Factory Code
(2) Date
(3) Serial No.

(5) Outside package

These reels shall be packed in the corrugated cardboard package and the following items shall be marked on a label and the label is stuck on the box.

(6) Dimensions of reel and taping (leader-tape, trailer-tape)
8-4. Specification of Outer Case

<table>
<thead>
<tr>
<th>Outer Case Dimensions (mm)</th>
<th>Standard Reel Quantity in Outer Case (Reel)</th>
</tr>
</thead>
<tbody>
<tr>
<td>W 186</td>
<td>D 186</td>
</tr>
<tr>
<td>H 93</td>
<td>5</td>
</tr>
</tbody>
</table>

* Above Outer Case size is typical. It depends on a quantity of an order.

9. **Caution**

9-1. Surge current

Excessive surge current (pulse current or rush current) than specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise. Please contact us in advance in case of applying the surge current.

9-2. Limitation of Applications

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

1. Aircraft equipment
2. Aerospace equipment
3. Undersea equipment
4. Power plant control equipment
5. Medical equipment
6. Disaster prevention / crime prevention equipment
7. Traffic signal equipment
8. Transportation equipment (vehicles, trains, ships, etc.)
9. Data-processing equipment
10. Applications of similar complexity and/or reliability requirements to the applications listed in the above

10. **Notice**

Products can only be soldered with reflow. This product is designed for solder mounting. Please consult us in advance for applying other mounting method such as conductive adhesive.

10-1. Land pattern designing

- Standard land dimensions (Reflow soldering)

10-2. Soldering Conditions

(1) Flux, Solder

<table>
<thead>
<tr>
<th>Flux</th>
<th>Use rosin-based flux, but not highly acidic flux (with chlorine content exceeding 0.2(wt)%). Do not use water-soluble flux.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solder</td>
<td>Use Sn-3.0Ag-0.5Cu solder Standard thickness of solder paste: 100 µm to 200 µm</td>
</tr>
</tbody>
</table>
(2) Soldering conditions

- Pre-heating should be in such a way that the temperature difference between solder and ferrite surface is limited to 150°C max. Also cooling into solvent after soldering should be in such a way that the temperature difference is limited to 100°C max. Insufficient pre-heating may cause cracks on the ferrite, resulting in the deterioration of product quality.
- Standard soldering profile and the limit soldering profile is as follows. The excessive limit soldering conditions may cause leaching of the electrode and/or resulting in the deterioration of product quality.

<table>
<thead>
<tr>
<th>Standard Profile</th>
<th>Limit Profile</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-heating</td>
<td>150~180°C, 90s±30s</td>
</tr>
<tr>
<td>Heating</td>
<td>above 220°C, 30s~60s</td>
</tr>
<tr>
<td>Peak temperature</td>
<td>245±3°C, 10s</td>
</tr>
<tr>
<td>Cycle of reflow</td>
<td>2 times</td>
</tr>
</tbody>
</table>

10-3. Reworking with soldering iron

- Pre-heating: 150°C, 1 min
- Tip temperature: 350°C max.
- Soldering time: 3(+1,-0) seconds.
- Soldering iron output: 80W max.
- Tip diameter: φ3mm max.
- Times: 2times max.

Note: Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the ferrite material due to the thermal shock.

10-4. Solder Volume

Solder shall be used not to be exceed as shown below.

Accordingly increasing the solder volume, the mechanical stress to product is also increased. Exceeding solder volume may cause the failure of mechanical or electrical performance.
10-5. Attention regarding P.C.B. bending

The following shall be considered when designing and laying out P.C.B.'s.

(1) P.C.B. shall be designed so that products are not subject to the mechanical stress for board warpage.

<Products direction>

Products shall be located in the sideways direction (Length:a-b) to the mechanical stress.

(2) Components location on P.C.B. separation.

It is effective to implement the following measures, to reduce stress in separating the board.
It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

<table>
<thead>
<tr>
<th>Contents of Measures</th>
<th>Stress Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Turn the mounting direction of the component parallel to the board separation surface.</td>
<td>A &gt; D *1</td>
</tr>
<tr>
<td>(2) Add slits in the board separation part.</td>
<td>A &gt; B</td>
</tr>
<tr>
<td>(3) Keep the mounting position of the component away from the board separation surface.</td>
<td>A &gt; C</td>
</tr>
</tbody>
</table>

*1 A > D is valid when stress is added vertically to the perforation as with Hand Separation. If a Cutting Disc is used, stress will be diagonal to the PCB, therefore A > D is invalid.

(3) Mounting Components Near Screw Holes

When a component is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the component in a position as far away from the screw holes as possible.

10-6. Mounting density

Add special attention to radiating heat of products when mounting the inductor near the products with heating. The excessive heat by other products may cause deterioration at joint of this product with substrate.
10-7. Cleaning Conditions

Products shall be cleaned on the following conditions.

(1) Cleaning temperature shall be limited to 60°C max. (40°C max. for IPA.)

(2) Ultrasonic cleaning shall comply with the following conditions, avoiding the resonance phenomenon at the mounted products and P.C.B.
   - Power: 20W/\max.
   - Frequency: 28kHz to 40kHz
   - Time: 5 min max.

(3) Cleaner
   1. Alternative cleaner
      - Isopropyl alcohol (IPA)
   2. Aqueous agent
      - PINE ALPHA ST-100S

(4) There shall be no residual flux and residual cleaner after cleaning.
   In the case of using aqueous agent, products shall be dried completely after rinse with de-ionized water in order to remove the cleaner.

(5) Other cleaning
   Please contact us.

10-8. Operating Environment

Do not use this product under the following environmental conditions, on deterioration of the Insulation Resistance of the Ferrite material and/or corrosion of Inner Electrode may result from the use.

(1) In the corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases and etc. (the sea breeze, Cl₂, H₂S, NH₃, SO₂, NO₂, etc)

(2) In the atmosphere where liquid such as organic solvent, may splash on the products.

(3) In the atmosphere where the temperature / humidity changes rapidly and it is easy to dew.

10-9. Resin coating

The impedance value may change and/or it may affect on the product’s performance due to high cure-stress of resin to be used for coating / molding products. So please pay your careful attention when you select resin. In prior to use, please make the reliability evaluation with the product mounted in your application set.

10-10. Handling of a substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the product.

Bending

Twisting

10-11. Storage Conditions

(1) Storage period
   Use the products within 12 months after delivered.
   Solderability should be checked if this period is exceeded.

(2) Storage conditions
   - Products should be stored in the warehouse on the following conditions.
     - Temperature: -10°C to 40°C
     - Humidity: 15% to 85% relative humidity
     - No rapid change on temperature and humidity
   - Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.
   - Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.
   - Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.
   - Products should be stored under the airtight packaged condition.

(3) Delivery
   Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.
11. **Note**

(1) Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.

(2) You are requested not to use our product deviating from the reference specifications.

(3) The contents of this reference specification are subject to change without advance notice. Please approve our product specifications or transact the approval sheet for product specifications before ordering.
