Features

BLF series is designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted. BLF series is effective in circuits without stable ground lines because BLF series does not need a connection to ground.

The nickel barrier structure of the external electrodes provides excellent solder heat resistance. The BLF03VK series has a high impedance specification at a high frequency of 5GHz range, and can be used for immunity measures up to 5GHz.

Product Data

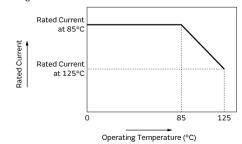

In operating temperature exceeding +85°C, derating of current is necessary for this series.

Please apply the derating curve shown in chart according to

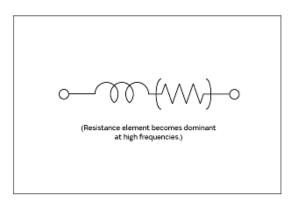

Derating of Rated Current

the operating temperature.
