

### FEATURES

- UL 60950 recognised for reinforced insulation
- ANSI/AAMI ES60601-1, 1 MOPP/ 2 MOOPs recognised
- 3kVAC isolation test voltage 'Hi Pot Test'
- Continuous short circuit protection
- Output voltage trim
- Remote on/off pin
- No electrolytic capacitors
- Operating temperature range -40°C to 105°C with derating
- 2:1 input range

### PRODUCT OVERVIEW

The MTC2 series of miniature surface mount DC-DC converters offers a single output voltage from input voltage ranges of 9-18V and 18-36V. The MTC2 series regulated output voltage is adjustable by  $\pm 10\%$  and a remote on/off pin is also included for application power saving.

The MTC2 ideally suited to applications which include medical, industrial, telecommunications, battery powered systems, and process automation.

### SELECTION GUIDE

Order Code <sup>1</sup>	Input Voltage	Output Voltage	Output Current	Rated Input Current	Efficiency		Ripple and Noise		MTTF <sup>2</sup>	
	Nom.				Min.	Typ.	Typ.	Max.	MIL.	Tel.
	V				%	%	mVp/p	mVp/p	kHrs	kHrs
MTC2S1203MC	12	3.3	606	210	76	78.5	40	50	997	15886
MTC2S1205MC	12	5	400	210	77	80	45	60	987	15761
MTC2S1212MC	12	12	167	200	81	83.5	45	60	985	15761
MTC2S2403MC	24	3.3	606	110	75	78.5	55	75	877	15230
MTC2S2405MC	24	5	400	100	76	79.5	35	55	795	15517
MTC2S2412MC	24	12	167	100	78	81.5	50	70	891	15638

### INPUT CHARACTERISTICS

Parameter	Conditions	Min.	Typ.	Max.	Units
Voltage range	12V input types	9	12	18	V
	24V input types	18	24	36	
Input reflected ripple current	All variants		4		mA p-p

### ISOLATION CHARACTERISTICS

Parameter	Conditions	Min.	Typ.	Max.	Units
Isolation test voltage	Production tested for 1 second	3000			VAC
	Qualification tested for 1 minute	5200			VDC
Isolation capacitance	All variants		20		pF
Resistance	Viso = 1kVDC	1			GΩ

### OUTPUT CHARACTERISTICS

Parameter	Conditions	Min.	Typ.	Max.	Units	
Rated power	All output types			2	W	
Minimal load to meet datasheet specification		10			%	
Voltage set point accuracy	All output types			$\pm 2$	%	
Line regulation	Low line to high line			$\pm 0.5$	%	
Load regulation	All output types			$\pm 0.5$	%	
Transient response	Peak deviation (25-75% & 75-25% swing)	3.3V output types			$\pm 8$	%V <sub>out</sub>
		12V output types			$\pm 2$	
		1205			$\pm 6$	
		2405			$\pm 5$	
Transient response	Settling time (1% V <sub>out</sub> Nom.)		45		μs	
			80			
			60			
			55			
			75			
		100				

1. Components are supplied in tape and reel packaging, please refer to package specification section. Orderable part numbers are MTC2SXXXXMC-R7 (30 pieces per reel), or MTC2SXXXXMC-R13 (150 pieces per reel)
2. Calculated using MIL-HDBK-217 FN2 and Telecordia SR-332 calculation model with nominal input voltage at full load.

All specifications typical at T<sub>a</sub>=25°C, nominal input voltage and rated output current unless otherwise specified.

GENERAL CHARACTERISTICS					
Parameter	Conditions	Min.	Typ.	Max.	Units
Switching frequency	1203		285		kHz
	1205, 1212		260		
	2403		185		
	2405		225		
	2412		240		
Remote on/off pin	Module on, pin unconnected or open collector floating				
	Module off (refer to application notes)	3.3V output types		3	V
		5V & 12V output types		2	
	1203, 1205		1.4		mW
	1212		1.5		
	2403, 2405		3.9		
2412		4.2			

TEMPERATURE CHARACTERISTICS					
Parameter	Conditions	Min.	Typ.	Max.	Units
Operation	See derating graphs	-40		105	°C
Storage		-50		125	
Case temperature above ambient	100% Load, Nom $V_{IN}$ , Still Air		22		

ABSOLUTE MAXIMUM RATINGS	
Short-circuit protection (for SELV input voltages)	Continuous
Remote on/off pin input voltage <sup>1</sup>	12V
Input voltage, MTC2 12V input types	25V
Input voltage, MTC2 24V input types	40V

1. Provided that external control circuit is the same as application note on page 5.

## TECHNICAL NOTES

### ISOLATION VOLTAGE

'Hi Pot Test', 'Flash Tested', 'Withstand Voltage', 'Proof Voltage', 'Dielectric Withstand Voltage' & 'Isolation Test Voltage' are all terms that relate to the same thing, a test voltage, applied for a specified time, across a component designed to provide electrical isolation, to verify the integrity of that isolation.

Murata Power Solutions MTC2 series of DC-DC converters are all 100% production tested at 3kVAC for 1 second and have been qualification tested at 5.2kVDC for 1 minute.

A question commonly asked is, "What is the continuous voltage that can be applied across the part in normal operation?"

The MTC2 series has been recognised by Underwriters Laboratory to 250Vrms for Reinforced Insulation.

### REPEATED HIGH-VOLTAGE ISOLATION TESTING

It is well known that repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials, construction and environment. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage.

## SAFETY APPROVAL

### ANSI/AAMI ES60601-1

The MTC2 series has been recognised by Underwriters Laboratory (UL) to ANSI/AAMI ES60601-1 and provides 1 MOPP (Means Of Patient Protection) and 2 MOOP (Means Of Operator Protection) based upon a working voltage of 250 Vrms max., between Primary and Secondary. File number E202895 applies.

### UL 60950

The MTC2 series has been recognised by Underwriters Laboratory (UL) to UL 60950 for reinforced insulation to a working voltage of 250 Vrms with a maximum measured product operating temperature of 105°C. File number E151252 applies.

Creepage and clearance 5 mm.

### FUSING

The MTC2 Series of converters are not internally fused so to meet the requirements of UL an anti-surge input line fuse should always be used with ratings as defined below.

Input Voltage, 12V: 0.75A

Input Voltage, 24V: 0.5A

All fuses should be UL recognised and rated to at least the maximum allowable DC input voltage.

## RoHS COMPLIANCE, MSL AND PSL INFORMATION

This series is compatible with Pb-Free soldering systems and is also backward compatible with Sn/Pb soldering systems.

The MTC2 series has a process, moisture, and reflow sensitivity classification of MSL2 PSL R7F as defined in J-STD-020 and J-STD-075. This translates to: MSL2 = 1 year floor life, PSL R7F = Peak reflow temperature 245°C with a limitation on the time above liquidus (217°C) which for this series is 90 sec max. Please refer to [application notes](#) for further information. The pin termination finish on this product series is Gold with Nickel Pre-plate.

**CHARACTERISATION TEST METHODS**

**Ripple & Noise Characterisation Method**

Ripple and noise measurements are performed with the following test configuration.

C1	1µF X7R multilayer ceramic capacitor, voltage rating to be a minimum of 3 times the output voltage of the DC-DC converter
C2	10µF tantalum capacitor, voltage rating to be a minimum of 1.5 times the output voltage of the DC-DC converter with an ESR of less than 100mΩ at 100 kHz
C3	100nF multilayer ceramic capacitor, general purpose
R1	450Ω resistor, carbon film, ±1% tolerance
R2	50Ω BNC termination
T1	3T of the coax cable through a ferrite toroid
RLOAD	Resistive load to the maximum power rating of the DC-DC converter. Connections should be made via twisted wires

Measured values are multiplied by 10 to obtain the specified values.

**Differential Mode Noise Test Schematic**

**APPLICATION NOTES**

**Maximum Output Capacitance**

Maximum output capacitance should not exceed:

Output Voltage V	Maximum Load Capacitance µF
3.3	470
5	470
12	220

**Start-up times**

Typical start up times for this series, with a typical input voltage rise time of 2.2µs and output capacitance of 470µF (3.3, 5V outputs) and 220µF (12V outputs), are shown in the table below. The product series will start into the maximum output capacitance with increased start times.

Part No.	Start-up times
	ms
MTC2S1203MC	3
MTC2S1205MC	10.5
MTC2S1212MC	31
MTC2S2403MC	7
MTC2S2405MC	12
MTC2S2412MC	21

Typical Wave Form:

**APPLICATION NOTES (Continued)**

**Control Pin**

The MTC2 converters have a shutdown feature which enables the user to disable the converter into a low power state. The control pin connects to the base of an internal NPN transistor with the converter shut down when the transistor is turned on by an external applied voltage. The converter can also be shut down using a 5V TTL signal (the unit is OFF for logic High and ON for logic LOW). If the control pin is left open (high impedance), the converter will run normally. A suitable application circuit is shown below.

$D_1$  (e.g. 1N4001) is necessary for correct operation of the MTC2 when the control signal is LOW. The recommended drive current  $I_b$  to shut down the MTC2 is 6mA to 15mA. The value of  $R_1$  can be derived as follows:

$$R_1 = \frac{V_c - V_{D1} - 0.6}{I_b}$$

For a switch input:

Calculate the value of  $R_1$  from the above equation given switch voltage  $V_c$  and chosen current between 6 and 15mA.

For 5V TTL Signal:

Set  $R_1$  to be between 320Ω to 800Ω.

**Output Voltage Adjustment**

The MTC2 series has a trim capability which is located at pin 3, this allows the user to independently adjust the output voltages by  $\pm 10\%$ . Adjustments to the output voltages can be accomplished via a single fixed resistor as shown in Figures 1 and 2. A single fixed resistor can increase or decrease the output voltage depending on its connection. Fixed resistors should have low temperature coefficient to minimize sensitivity to changes in temperature.

A single resistor connected from the TRIM pin (pin 3) to the +Vout (pin 4), will decrease the output voltage which is shown in figure 1.

A single resistor connected from the TRIM pin (pin 3) to the -Vout (pin 2) will increase the output voltage which is shown in figure 2.

**TRIM DOWN**

Figure 1. Trim connections to decrease the output voltage

$$3.3V_{out} R_{TRIM} = \frac{18.64k \times V_{out} - 52.3k}{3.32 - V_{out}}$$

$$5V_{out} R_{TRIM} = \frac{33.2k \times V_{out} - 141k}{5 - V_{out}}$$

$$12V_{out} R_{TRIM} = \frac{24.4k \times V_{out} - 181.388k}{12.2087 - V_{out}}$$

**TRIM UP**

Figure 2. Trim connections to increase the output voltage

$$3.3V_{out} R_{TRIM} = \frac{14k \times V_{out} - 52.3k}{3.32 - V_{out}}$$

$$5V_{out} R_{TRIM} = \frac{23.2k \times V_{out} - 141k}{5 - V_{out}}$$

$$12V_{out} R_{TRIM} = \frac{12.4k \times V_{out} - 181.388k}{12.2087 - V_{out}}$$

Accuracy of adjustment is subject to tolerances of resistors and factory adjusted output accuracy. Vout is equal to the desired output voltage.

**DISCLAIMER**

Unless otherwise stated in the datasheet, all products are designed for standard commercial and industrial applications and NOT for safety-critical and/or life-critical applications.

Particularly for safety-critical and/or life-critical applications, i.e. applications that may directly endanger or cause the loss of life, inflict bodily harm and/or loss or severe damage to equipment/property, and severely harm the environment, a prior explicit written approval from Murata is strictly required. Any use of Murata standard products for any safety-critical, life-critical or any related applications without any prior explicit written approval from Murata shall be deemed unauthorised use.

These applications include but are not limited to:

- Aircraft equipment
- Aerospace equipment
- Undersea equipment
- Power plant control equipment
- Medical equipment
- Transportation equipment (automobiles, trains, ships, etc.)
- Traffic signal equipment
- Disaster prevention / crime prevention equipment
- Data Processing equipment

Murata makes no express or implied warranty, representation, or guarantee of suitability, fitness for any particular use/purpose and/or compatibility with any application or device of the buyer, nor does Murata assume any liability whatsoever arising out of unauthorised use of any Murata product for the application of the buyer. The suitability, fitness for any particular use/purpose and/or compatibility of Murata product with any application or device of the buyer remain to be the responsibility and liability of the buyer.

Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards that anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm, and take appropriate remedial actions. Buyer will fully indemnify and hold Murata, its affiliated companies, and its representatives harmless against any damages arising out of unauthorised use of any Murata products in any safety-critical and/or life-critical applications.

Remark: Murata in this section refers to Murata Manufacturing Company and its affiliated companies worldwide including, but not limited to, Murata Power Solutions.

This product is subject to the following [operating requirements](https://www.murata.com/en-eu/products/power/requirements) and the [Life and Safety Critical Application Sales Policy](https://www.murata.com/en-eu/products/power/requirements):
