FEATURES
- 30W DC-DC converter
- 10.8-27V Input Voltage range
- 22.4 x 35.5 x 8.9mm Size
- 90% efficiency (typical)
- Surface mount module
- 2250Vdc Input-Output Isolation
- Operating Temperature range -40 to +85 °C

PRODUCT OVERVIEW
The MYBSS054R6EBF is an isolated, regulated, DC-DC converter that has an input range of 10.8-27Vdc with a typical efficiency of 90%, and full 2250 Volt DC isolation. The MYBSS054R6EBF is ideal for PoE PSE Devices. Module has self-protection features. These include input undervoltage lockout and output current limit. The outputs current limit is using the hiccup autorestart technique.

| Electromagnetic Interference Conducted, EN55022/CISPR22 | External filter is required | B |
| RoHS rating | | | | RoHS-6 |

**Specification Notes**

Unless otherwise noted, all specifications are typical at nominal input voltage, nominal output voltage and full load. General conditions are +25° C ambient temperature, near sea level altitude, natural convection airflow. All models are tested and specified with external parallel 47uF, 0.1μF and 10μF output capacitors (See Technical Notes).

TECHNICAL NOTES

Over Current Protection
Over Current Protection operates with a controller circuit failure or overload condition, and DC-DC converter will enter hiccup mode. After rejected the abnormal mode, DC-DC converter will automatically restart.

External Input Capacitor
This capacitor minimizes the influence from the wiring to the input or the components like switch for output performance. Please evaluate the board to choose the adequate value.

Test Circuit
The initial values in Functional Specification are measured in the following test circuit.

- C1: Low Impedance Electrolytic Capacitor 100μF
- C2: Low Impedance Electrolytic Capacitor 33~56μF
- RL: Electronic Load Device: LN-1000A-G7 KEISOKU GIKEN equivalent
- Vin: DC Power Supply: Model HP6675A KEYSIGHT equivalent
- V: Digital Multimeter: Model HP34401A KEYSIGHT equivalent

When deviating from the above, DC-DC converter may operate abnormally. It should be fully confirmed on your board before use.

Ripple Noise Test
Output ripple noise is measured using designated external output components, circuits and layout as shown below.

- C2: Low Impedance Electrolytic Capacitor 47μF
- C3: Ceramic Capacitor 0.1μF
- C4: Ceramic Capacitor 10μF

Conduction Noise
The external input filter is installed and the circuit diagram is shown below.

Thermal Derating Condition
The output current is limited by the derating curve. The derating curve in this datasheet illustrate typical operation under a variety of conditions.

DC-DC Converter is tested on a 101.6x188mm, 2 layers Copper evaluation board at Vin=24V.
The Unit Under Test (UUT) is set up as shown below. UUT is covered by acrylic box to avoid airflow.
The temperature measurement points are shown below table. The temperature of measurement points should not exceed the maximum temperatures in the below table.

<table>

<td>1 time</td>
</tr>
</tbody>
</table>

Do not vibrate for the products on reflow. Please need to take care of temperature control because mounted parts may come off if the product is left under the high temperature. Do not mount on backside of the board.

Many other factors influence the success of SMT reflow soldering. Since your production environment may differ, please thoroughly review these guidelines with your process engineers.

Functional Specifications
Please contact Murata Sales before using this product for the applications listed below. These are applications that require very high reliability of prevention of defects which might directly cause damage to third party’s life, body, or property.
1. Aircraft equipment
2. Aerospace equipment
3. Undersea equipment
4. Power plant control equipment
5. Medical equipment
6. Transportation equipment (cars, buses, trucks, trains, ships, etc.)
7. Traffic signal equipment
8. Disaster prevention / crime prevention equipment
9. Data-processing equipment
10. Application of similar complexity and/or reliability listed as above.

Storage
Please store this product in an environment where the temperature/humidity is stable in the range 0 to 40°C/10 to 75%RH and no direct sunlight. Use the product within 6 months after delivery.
Please avoid storage conditions where humidity and temperature change rapidly, as that may cause condensation on the product, which might degrade the quality of the product.
Please do not store the product environments that are dusty, in direct exposure to sea breeze, or in an atmosphere containing corrosive gas (Cl2, NH3, SO2, NOX and so on).

Operational environment and operational conditions
This product is not chemical-proof or rust-proof.
In order to prevent this product from leakage of electricity and/or abnormal temperature increase, do not use the product under the following circumstances:
(1) in an atmosphere containing corrosive gas (Cl2, NH3, SO2, NOX and so on).
(2) in a dusty place.
(3) in a place exposed to direct sunlight.
(4) in such a place where water splashes or in such a humid place where water condenses.
(5) in a place exposed to sea breeze.
(6) in any other places similar to the above (1) through (5).

Operational Conditions
Please use the product within specified values (power supply, temperature, input, output and load condition etc.). Input voltage drops for line impedance, so please make sure that input voltage is within in specified values.
If the product is used over the specified values, it may damage the product, reduce the quality, and even if the products can endure the condition for short time, it may cause degradation of the reliability.

http://www.murata.com/products/power
Note Prior to use
If you apply high static electricity, voltage higher than rated voltage or reverse voltage to the product, it may cause defects in the products or degrade the reliability.
Please avoid the following items:
1. Over rating power supply, reverse power supply or not-enough connection of input voltage and 0V(DC)line
2. Electrostatic discharge by production line and/or operator
3. Electrified product by electrostatic induction

Do not subject product to excessive mechanical shock. If you drop the product on the floor it might cause a crack to the core of inductors and monolithic ceramic capacitors. Also please pay attention to handling; the mounted parts can be dislodged if subjected to excessive force.

Transportation
If you transport the product, please pack it so that the package will not be damaged by mechanical vibration or mechanical shock, and please educate and guide the carrier to prevent rough handling.

Note
1. Please make sure that the product has been evaluated and confirmed against your specifications when it is mounted to your product.
2. All the items and parameters in this product specification have been prescribed on the premise that our product is used for the purpose, under the conditions and in the environment agreed upon between you and us. You are requested not to use our product deviating from such agreement.
3. We consider it not appropriate to include other terms and conditions for transaction warranty in product specifications, drawings or other technical documents. Therefore, if your technical documents as above include such terms and conditions as warranty clause, product liability clause, or intellectual property infringement liability clause, we will not be able to accept such terms and conditions unless they are based on the governmental regulation or they are stated in a separate contract agreement.

This product is subject to the following operating requirements and the Life and Safety Critical Application Sales Policy:
