Product Specification for Reference Only

Issued Date: 01 July, 2013
Rev.: I

Part Description: Ultrasound Sensor

MURATA Part No.: MA40MF14-0B

The product specification in this sheet is for reference only.
The content of this specification is subject to change.

You are requested to receive the latest specification and to return one
copy of the specification to us with your receipt signature before going
into mass production.

Specification of Ultrasonic Transducer

Type : MA40MF14-0B

1. **Scope**
   
   This product specification is applied to the drip proof type ultrasonic transducer used for an obstacle detection system around a vehicle. Please contact us when using this product for any other applications than described in the above.

2. **Customer Part Number**

3. **Murata Part Number**

   MA40MF14-0B

4. **Dimension**

   as per Fig.1

5. **Absolute Maximum Ratings**

</table>
7. Environmental tests (Standard Test Condition: 25 ± 3 deg C, 45 to 75 % R.H)

7.1 Shock Test
The variation of the Sound Pressure Level at 40 kHz is within ±3dB compared with initial figures at 25 deg C after following test conditions:
- Acceleration: sine 980 m/s² (100G), 6ms
- Direction: 3 directions
- Shock time: 3 times / directions

7.2 Vibration Test
The variation of the S.P.L at 40 kHz is within ±3dB compared with initial figures at 25 deg C after following test conditions:
- Vibration frequency: 10 to 200 Hz
- Sweep Period: 15 min.
- Acceleration: 43.12 m/s² (4.4G)
- Directions: 3 directions
- Time: 96 hours / direction

7.3 Drop Test
The variation of the S.P.L at 40 kHz is within ±3dB compared with initial figures at 25 deg C after following test conditions:
- Height: 1 meter onto concrete floor
- Times: 3 times

7.4 Pull Strength
There should be no substantial damage after 2.45 N of force.

7.5 High Temperature Test
The variation of the S.P.L at 40 kHz is within ±3dB compared with initial figures at 25 deg C in 24 hours after following test conditions:
- Temperature: +85 ± 2 deg C
- Time: 1000 hours

7.6 Low Temperature Test
The variation of the S.P.L at 40 kHz is within ±3dB compared with initial figures at 25 deg C in 24 hours after following test conditions:
- Temperature: -40 ± 3 deg C
- Time: 1000 hours

7.7 Humidity Test
The variation of the S.P.L at 40 kHz is within ±3dB compared with initial figures at 25 deg C in 24 hours after following test conditions:
- Temperature: +65 ± 2 deg C
- Humidity: 90 to 95 % R.H.
- Time: 1000 hours

7.8 Heat Cycle Test
The variation of the S.P.L at 40 kHz is within ±3dB compared with initial figures at 25 deg C in 24 hours after following test conditions:
- Temperature: +85 ± 3 deg C, 30 min
- -40 ± 3 deg C, 30 min
- Cycles: 1000 cycles
8. **Caution**

**8-1 Limitation of Applications**

Please do not use for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party’s life, body or property.

1) Aircraft equipment
2) Aerospace equipment
3) Undersea equipment
4) Power plant control equipment
5) Medical equipment
6) Transportation equipment (trains, ships, etc.)
7) Traffic signal equipment
8) Disaster prevention / crime prevention equipment
9) Data-processing equipment
10) Forklift, road building equipment and other special-purpose vehicles
11) Military equipment (regardless of directly/indirectly)
12) Security device/system
13) Application of similar complexity and/or reliability requirement to the applications listed in the above

**8-2 Fail-safe**

Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

9. **Caution in use**

**9-1. Notice in design and usage**

1) The transducer may generate surge voltage by mechanical or thermal shock. Care should be taken to protect from it in designing your application circuit.
2) Please do not apply an excessive stress to the transducer because the piezo electric element of the transducer might be damaged or inner cable might be disconnected.
3) The piezo electric element of the transducer may be damaged by force pressure from back of the transducer.
4) Please do not apply D.C. voltage to the transducer to avoid failure. Electrode of piezo electric element might be shorted out with electronic migration.
5) Please do not use the transducer in water.
6) Please hold the transducer with soft material such as rubber. The direct holding with hard material will be cause of vibration leakage from, or into the transducer. It will be influenced to decay time and short distance detection.
7) Please avoid humid penetration at the rear of the transducer in order to avoid short circuit. Please use the transducer with waterproof design.
8) Please do not exceed 95 deg C / 120min in the assembly process and painting process to avoid malfunction.
9) The transducer is designed for dual use purpose. Please do not use the transducer only as receiver.
10) Care should be taken when select the material to hold, or cover backside of transducer. If it contains sulfur or sulfide, electrode on piezo-electric element may corroded and because of malfunction.

**9-2. Notice in storage**

1) The products should not be used or stored in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali or the like are present. Store the products in the room where is normal temperature and humidity, and avoid the sunlight, sudden changes in temperature and humidity. It may cause of failure or malfunction in such conditions.
2) Store the products where the temperature and relative humidity do not exceed -10 to 40 deg C, and 30 to 80%RH. Please Use the products within 6 months after receiving.

9-3. Notice in soldering and mounting
   1) Please do not clean the transducer with water or solvent.
   2) Please do not solder the transducer with flow or reflow soldering. Do not exceed the soldering iron temperature 350 deg C and 3 sec.

10. Note
   1) Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.
   2) You are requested not to use our product deviating from the agreed specifications.
   3) We consider it not to appropriate to include any terms and conditions with regard to the business transaction in the product specifications, drawings or other technical documents. Therefore, if your technical documents as above include such terms and conditions such as warranty clause, product liability clause, or intellectual property infringement liability clause, they will be deemed to be invalid.
Dimensions

Aluminum case surface
NON Hexavalent Chrome for anti-corrosion
Epoxy primer and Black color paint.

Lead wire: Black, AWG 30
(Connected to Aluminum-case)

Lead wire: Red, AWG 30

# : EIAJ code

unit : mm
